# Introduction

This book is filled with all types of puzzles to provide your students with hours of entertainment and fun while they learn and practice basic math skills. You'll find mazes, crossword puzzles, word searches, riddle searches, magic squares, and more. As an added bonus, your students will sharpen their reasoning skills and problem-solving abilities as they puzzle over these pages.

## How to Use This Book

Each puzzle is designed to reinforce a basic math skill. At the top of each page, you will see the skill in bold letters. The Table of Contents also has a complete list of topics to enable you to identify the activities that will correlate with your curriculum easily.

## Grouping

Students can complete all of these activities alone or with a partner, depending on your goals for the lesson. If you would like students to share problem-solving strategies and communicate about mathematical ideas, have them work in pairs. You may want students to use the activities independently after they have completed other work or to reinforce specific mathematical skills.

## Materials Needed

All of the activities require paper, pencil, and an eraser. Brain Rattler (page 38) requires glue and scissors. We recommend that students use a calculator on Exponent Experts Only (page 16), Galactic Math (page 40), and Computer Glitch (page 43).

## Taking It Further

Students not only enjoy solving mathematics puzzles; they enjoy and benefit from making them, too. After your students have completed several activities of one puzzle type, give them the opportunity to create their own puzzles based on familiar formats. Choose several student-made puzzles to copy, and distribute them for the other students to solve.

My students enjoyed making puzzles so much that we extended the idea even further: We had a Math Puzzle Afternoon for which each student created a puzzle. We made ten copies of each student's puzzle and placed the puzzles in stacks around the room. The students spent the afternoon going from one desk to another solving puzzles and enjoying math created by their classmates.

## Answers

You will find the answers for each lesson at the end of the book.

I hope that after using these materials, your students will enjoy solving, making, and sharing puzzles as much as mine did. Enjoy!

## All Mixed Up

Finding the sums is easy. But when you try to put these numbers correctly in the puzzle, you'll find yourself all mixed up!

Find the sum and write the answer in the puzzle. Each digit can occupy only one place to make the whole puzzle fit together perfectly. The first one has been done for you.

$$\begin{array}{r} 54 \\ + 98 \\ \hline 152 \end{array}$$

$$\begin{array}{r} 69 \\ + 37 \\ \hline \end{array}$$

$$\begin{array}{r} 31 \\ + 85 \\ \hline \end{array}$$

# Crisscross Number Puzzles

Solve the subtraction problems. Each of the eight 4-digit answers fits into the puzzle below. One digit must be placed in each box to form a 4-digit number in each row (from left to right) and each column (from top to bottom). The clues will help you decide where to place the numbers.

$$\begin{array}{r} 1) \quad 30,771 \\ - 29,419 \\ \hline \end{array}$$

$$\begin{array}{r} 2) \quad 16,570 \\ - 13,292 \\ \hline \end{array}$$

$$\begin{array}{r} 3) \quad 70,610 \\ - 62,410 \\ \hline \end{array}$$

$$\begin{array}{r} 4) \quad 49,905 \\ - 47,559 \\ \hline \end{array}$$

$$\begin{array}{r} 5) \quad 11,852 \\ - 8,402 \\ \hline \end{array}$$

$$\begin{array}{r} 6) \quad 19,439 \\ - 9,829 \\ \hline \end{array}$$

$$\begin{array}{r} 7) \quad 12,555 \\ - 5,004 \\ \hline \end{array}$$

$$\begin{array}{r} 8) \quad 11,593 \\ - 8,454 \\ \hline \end{array}$$

	A	B	C	D
E				
F				
G				
H				

### Clues

- A. All of the digits are odd.
- B. The first digit is even and less than 5.
- C. The second and third digits are equal.
- D. The sum of the digits is 10.
- E. The last digit is 8.
- F. The first digit is 1.
- G. The sum of the digits is 12.
- H. The number is even and greater than 9,000.

Follow the same instructions for this puzzle. Be careful—it has only three clues.

$$\begin{array}{r} 9) \quad 34,259 \\ - 24,941 \\ \hline \end{array}$$

$$\begin{array}{r} 10) \quad 15,031 \\ - 11,390 \\ \hline \end{array}$$

$$\begin{array}{r} 11) \quad 10,014 \\ - 2,519 \\ \hline \end{array}$$

$$\begin{array}{r} 12) \quad 9,856 \\ - 7,683 \\ \hline \end{array}$$

$$\begin{array}{r} 13) \quad 15,342 \\ - 9,711 \\ \hline \end{array}$$

$$\begin{array}{r} 14) \quad 11,916 \\ - 2,344 \\ \hline \end{array}$$

$$\begin{array}{r} 15) \quad 7,378 \\ - 5,981 \\ \hline \end{array}$$

$$\begin{array}{r} 16) \quad 16,866 \\ - 8,713 \\ \hline \end{array}$$

	A	B	C	D
E				
F				
G				
H				

### Clues

- A. The sum of the digits is 23.
- E. The number is divisible by 3.
- G. The number is divisible by 5.

# Ridiculous Riddles

Shade the numbers indicated by place value. The first one has been done to get you started. The shaded blocks will spell the answer to the riddle:

**Forward I am heavy, backward I am not. What am I?**

ten billions, billions, hundred millions	2	3,	7	2	0,	0	0	0,	0	0	0
billions	1	9,	2	2	9,	0	0	0,	4	2	3
billions	3	2,	8	9	0,	0	0	0,	0	0	0
billions, millions, hundred thousands, ten thousands, hundreds, tens, ones	1	1,	0	0	5,	0	0	0,	7	0	9
billions, millions, ten thousands, hundreds, ones	3	3,	0	0	2,	1	1	1,	9	3	5
billions, millions, ten thousands, hundreds, ones	7	0,	0	0	0,	0	0	0,	0	0	0
billions, millions, ten thousands, hundreds, ones	4	1,	8	4	5,	0	2	2,	1	0	9
billions, millions, hundred thousands, ten thousands, hundreds, ones	8	0,	6	5	2,	2	1	0,	0	0	0

Ready to try another one? The shaded blocks will spell the answer to the riddle:

**I'm on a needle, in a potato, and stare at you in the mirror. Who am I?**

ten billions, billions, hundred millions, millions, ten thousands, hundreds, tens, ones	9	0,	0	5	1,	2	3	0,	0	3	7
ten billions, millions, ten thousands, hundreds	2	2,	1	7	9,	9	5	2,	1	0	0
ten billions, millions, ten thousands, hundreds	7	5,	5	1	2,	1	4	5,	7	5	8
ten billions, billions, hundred millions, millions, hundred thousands, ten thousands, hundreds, tens, ones	2	8,	0	0	0,	0	0	0,	0	7	7
ten billions, hundred thousands, hundreds	1	1,	8	3	5,	4	5	0,	0	9	0
ten billions, hundred thousands, hundreds	2	1,	2	1	7,	8	3	5,	6	5	7
ten billions, billions, hundred millions, hundred thousands, hundreds, tens, ones	8	7,	9	0	0,	0	9	3,	2	1	1

Name \_\_\_\_\_

Date \_\_\_\_\_

# More Ridiculous Riddles

Shade the numbers indicated by place value. The first one has been done to get you started. The shaded blocks will spell the answer to the riddle:

**Can you spell eighty with two letters?**

tens, tenths, hundredths, thousandths	5	4	3	.	1	2	7
thousands, tens, tenths	7	1	9	1	.	6	2
hundreds, ones, hundredths	8	4	8	.	2	0	1
thousands, hundreds, tens, tenths	9	0	2	4	.	7	8
hundreds, tens, ones, hundredths	3	2	1	.	1	1	9
ones, tenths, ten thousandths	4	.	5	6	1	0	7
hundreds, ones, hundredths	9	0	6	.	2	5	2
ones, tenths, ten thousandths	3	.	1	9	3	0	1

Ready to try another one? The shaded blocks will spell the answer to the riddle:

**Can you spell an insect with one letter?**

tenths, hundredths, thousandths, ten thousandths	3	.	7	1	0	6	3
ones, thousandths	1	1	2	.	4	4	6
tenths, hundred thousandths	8	.	7	1	3	9	4
tenths, hundredths, thousandths, ten thousandths	9	.	2	0	0	8	9
hundredths, millionths	.	2	3	1	8	9	2
tenths, hundred thousandths	5	.	0	2	7	9	1
tenths, hundredths, thousandths, ten thousandths	4	.	8	2	0	1	7

# Amazing Primes

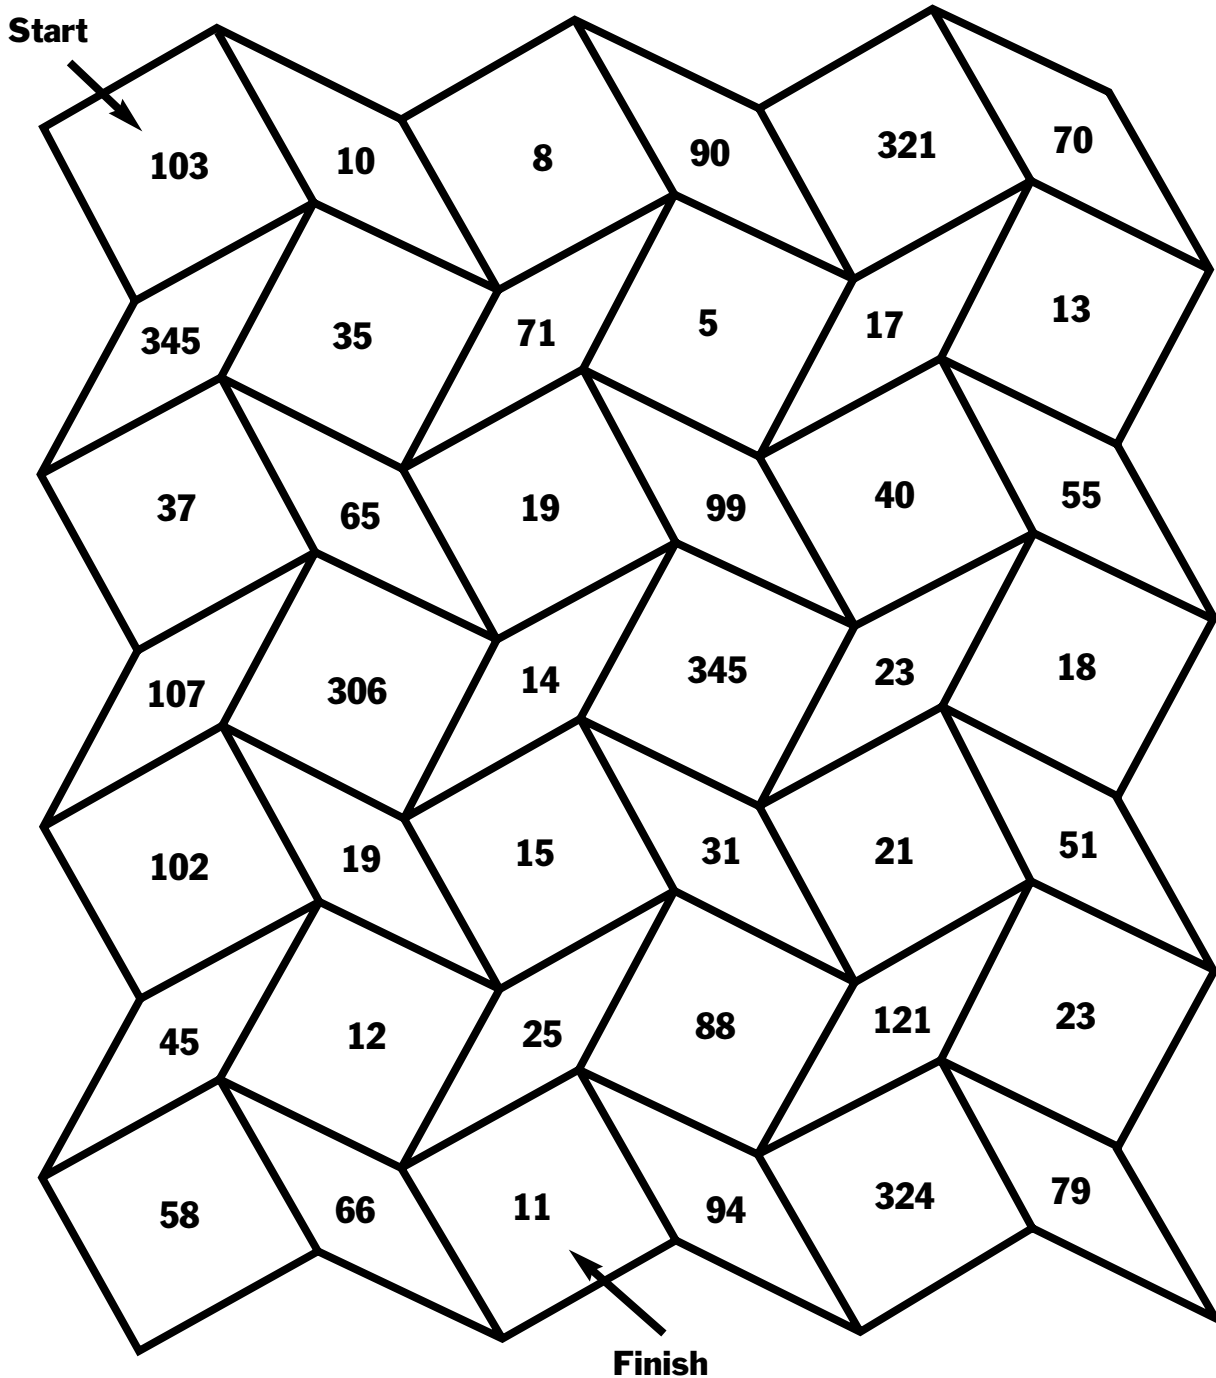

Find your way through the maze from start to finish without crossing over any composite numbers. You must pass over all 15 prime numbers between 1 and 50 at least once.

Name \_\_\_\_\_

Date \_\_\_\_\_

# Pattern Block Maze

If you can find your way through the pattern block maze from start to finish without crossing over any shapes with numbers that are divisible by 2, 3, or 4, you are a superstar. If you find a path where none of the numbers are divisible by 2, 3, or 4 and the sum of the numbers equals 389, you are a genius! A path may be formed by connecting a corner or a side.

Name \_\_\_\_\_

Date \_\_\_\_\_

# An Amaze-ing Discovery

Leaping Leprechauns! There really is a pot of gold at the end of the rainbow. Run through this amaze-ing neighborhood, making sure you never cross over numbers that are divisible by 5 or 9. If you make it from Start to the pot of gold before “Blarney,” you will be rich indeed.

Finish

Name \_\_\_\_\_

Date \_\_\_\_\_

# Maze Craze

Find your way through the maze from start to finish. You may pass only over numbers that are divisible by 6 or 8. Remember, a number is divisible by 6 if it is even and divisible by 3, and a large number is divisible by 8 if the last three digits of the number are divisible by 8.

**Start**

15, 1,200, 54, 7, 36, 128, 212, 24, 34, 21, 12, 47, 48, 30, 240, 2,888, 96, 3,000, 95, 31, 66, 37, 5, 81, 33, 200, 1,800, 3,900

**Finish**

Name \_\_\_\_\_

# Master Maze

If you're an expert at tunneling through mazes, this master maze is for you. Here's how to begin. Work through the maze and do not cross over your original path. As you pass each fraction, find it in reduced form in the data bank and cross it out. Continue until all of the fractions in the data bank have been located, then exit.

**Start**

Fractions found in the maze:

- $\frac{6}{9}$
- $\frac{15}{27}$
- $\frac{2}{20}$
- $\frac{4}{52}$
- $\frac{12}{44}$
- $\frac{5}{35}$
- $\frac{6}{52}$
- $\frac{18}{63}$
- $\frac{12}{15}$
- $\frac{12}{14}$
- $\frac{12}{48}$
- $\frac{2}{6}$
- $\frac{2}{34}$
- $\frac{19}{38}$
- $\frac{5}{45}$
- $\frac{4}{32}$
- $\frac{14}{72}$
- $\frac{19}{95}$
- $\frac{15}{35}$
- $\frac{21}{24}$
- $\frac{8}{96}$
- $\frac{5}{95}$
- $\frac{4}{24}$
- $\frac{9}{66}$

DATA BANK	
$\frac{1}{2}$	$\frac{1}{3}$
$\frac{2}{3}$	$\frac{1}{5}$
$\frac{1}{6}$	$\frac{2}{7}$

# Star Maze

Find your way through the maze from start to finish by crossing over the next greatest fraction.  
Draw a line to show the path.

The maze is a large star shape with a smaller star in the center. The start is at the top-left point of the outer star, and the finish is at the center of the inner star. The path is determined by choosing the next greatest fraction at each junction.

Fractions in the maze:

- Start:  $\frac{1}{60}$
- Top-left junction:  $\frac{1}{7}$
- Top-right junction:  $\frac{2}{55}$
- Left junction:  $\frac{5}{7}$
- Right junction:  $\frac{1}{25}$
- Inner-left junction:  $\frac{2}{20}$
- Inner-right junction:  $\frac{7}{8}$
- Center:  $\frac{3}{3}$  Finish
- Bottom-left junction:  $\frac{2}{9}$
- Bottom-right junction:  $\frac{2}{3}$
- Bottom junction:  $\frac{4}{9}$
- Inner-bottom-left junction:  $\frac{1}{4}$
- Inner-bottom-right junction:  $\frac{3}{4}$
- Inner-bottom junction:  $\frac{2}{3}$
- Outer-bottom-left junction:  $\frac{3}{4}$
- Outer-bottom-right junction:  $\frac{8}{64}$
- Outer-bottom junction:  $\frac{5}{9}$
- Inner-top junction:  $\frac{1}{11}$
- Inner-middle junction:  $\frac{1}{3}$
- Inner-bottom junction:  $\frac{9}{11}$
- Inner-bottom junction:  $\frac{1}{3}$

# Domino Math

Think of each domino as a fraction. The top number of dots is the numerator and the bottom number of dots is the denominator. For example, the first domino in number 1 below equals  $\frac{4}{5}$ . Use the dominoes in the fraction bank to make each of the number statements true. Use each domino only once. You may use numbers or draw dots to show your answers. The first problem has been done for you.

# Bull's Eye

Tom and Andrew are playing a game of "Product Darts." Each player shoots two darts and multiplies the numbers together. The player with the highest number wins the round. Look at the dartboard below and answer the questions.

1. If Tom's score was greater than  $22\frac{1}{2}$ , where did his darts land?
2. If Andrew's score was  $13\frac{3}{4}$ , where did his darts land?
3. If Tom's score is a whole number, where did his darts land?
4. If Andrew's score was  $9\frac{31}{32}$ , where did his darts land?
5. It's your turn to make up a dartboard problem.  
Trade with friends and see if they can solve your problem.

# Brain-Bending Labyrinth

Solve the problems. Then, find your way through the labyrinth by following a path of increasing decimal answers. To form a path, a corner or a side must connect the diamonds. Be careful, you don't want to land on a diamond with a mummy, skeleton, or an answer with the unlucky number 13!

The labyrinth consists of 18 diamonds arranged in a grid. Each diamond contains a multiplication problem. A path of increasing decimal answers must be found, avoiding diamonds with mummies, skeletons, or the number 13.

$\begin{array}{r} 0.4 \\ \times 1.2 \\ \hline \end{array}$	$\begin{array}{r} 7.8 \\ \times 2.1 \\ \hline \end{array}$	$\begin{array}{r} 15.9 \\ \times 2.31 \\ \hline \end{array}$

## Galactic Math

Find your way through the Islandic Labyrinth. Begin your journey at the top. Move along the paths from one circle to the next, performing the operation indicated. For instance:

$$\begin{array}{c} \textcircled{+7} \\ \text{---} \\ \textcircled{-5} \end{array} = 12$$

$$\begin{array}{c} \textcircled{-8} \\ \text{---} \\ \textcircled{+3} \end{array} = -5$$

Tally your score as you go. You may never retrace your path or cross over it. When you get to the exit, if your score is 19, you may exit. If not, try again.

# Brain Crusher

1. Get ready for fun, get ready for agony, get ready to solve a brain-crushing math square! Here's how. Place the nine numbers in the integer bank into the empty squares so that all of the columns and rows form correct mathematical sentences. All the numbers must be used once and there is only one answer. One of the numbers has been placed to get you started.

<b>INTEGER BANK</b>	<b>-8 ✓</b>	<b>1</b>	<b>-3</b>	<b>11</b>	<b>-2</b>	<b>-1</b>	<b>9</b>	<b>-7</b>	<b>4</b>
---------------------	-------------	----------	-----------	-----------	-----------	-----------	----------	-----------	----------

	+	-8	=	
-		-		-
	+		=	
=		=		=
	+		=	

2. Ready for another one? This time the numbers are in the puzzle, but the operation signs are missing. Place subtraction or addition signs in the empty boxes so that all of the columns and rows form correct mathematical sentences.

<b>-4</b>		<b>-7</b>	<b>=</b>	<b>-11</b>
<b>-7</b>		<b>1</b>	<b>=</b>	<b>-6</b>
<b>=</b>		<b>=</b>		<b>=</b>
<b>3</b>		<b>-8</b>	<b>=</b>	<b>-5</b>

# Seven Circles

Get ready to solve these mind-boggling mystery circles! Here's how. Each circle has a mystery number value. Where some circles overlap, there is a number; this number is the product of the mystery values of the two circles. For instance:

- Solve these mystery circles by placing one of the following numbers into each circle: -3, -2, -1, 0, 1, 2, and 3 (each number is only used once). Then, write the numbers in the answer box.

**Answer Box**

A=

B=

C=

D=

E=

F=

G=

- To solve these mystery circles, place one of the following numbers in each circle: -8, -7, -6, -3, 2, 4, and 9 (each number is only used once). Then, write the numbers in the answer box.

**Answer Box**

A=

B=

C=

D=

E=

F=

G=

# Computer Glitch

The math teacher was creating a test on her computer late at night. All of a sudden she punched the wrong key, and all of the numbers scrambled. The divisors, dividends, and quotients are scattered around the page. Can you put the numbers back together so that when you divide the dividend by the divisor, you get the right quotient? You may want to use a calculator. The first one has been done for you.

Scattered integers: -9, 13, -231, -44, -11, 17 ✓, -19, 32, -512, 105, 4, -4, -48, -17, -3 ✓, -15

1.

$$\begin{array}{r} 17 \\ -3 \overline{) -51} \end{array}$$

2.

$$\begin{array}{r} \phantom{00} \\ 11 \overline{) \phantom{00}} \end{array}$$

3.

$$\begin{array}{r} -7 \\ \phantom{00} \overline{) \phantom{00}} \end{array}$$

4.

$$\begin{array}{r} \phantom{00} \\ -16 \overline{) \phantom{00}} \end{array}$$

5.

$$\begin{array}{r} 12 \\ \phantom{00} \overline{) \phantom{00}} \end{array}$$

6.

$$\begin{array}{r} \phantom{00} \\ \phantom{00} \overline{) 153} \end{array}$$

7.

$$\begin{array}{r} \phantom{00} \\ 21 \overline{) \phantom{00}} \end{array}$$

8.

$$\begin{array}{r} \phantom{00} \\ \phantom{00} \overline{) -247} \end{array}$$
